

**Municipalities: Clean Solutions to your Present Day Infrastructure Problems!**

Clean on-site power, including hybrid systems, can offer you solutions to your municipal energy needs. Renewable power systems add value to municipal property and lower maintenance costs. Protect critical infrastructure from electric grid disruptions and natural disasters. Be better prepared for emergency response. Allow for more remote capabilities and reduce reliance on costs for ditching, stringing, or maintaining wires.

**Solar Street and Signal Lights**

- Sound economics
- Emission free
- No frequent need for power lines

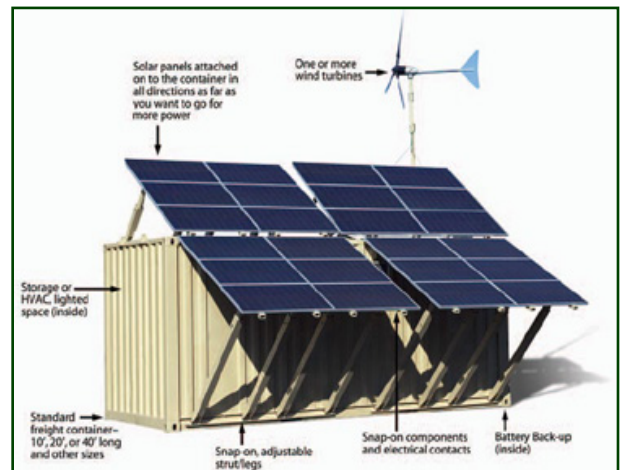

**Solar Trash Compactors**

- Keep your cities clean without relying on frequent contractor pick-ups
- Reduces pollution and waste spillage

**Solar Power WIFI**

- Remote Power for Campuses, Parks, Urban/Suburban Areas

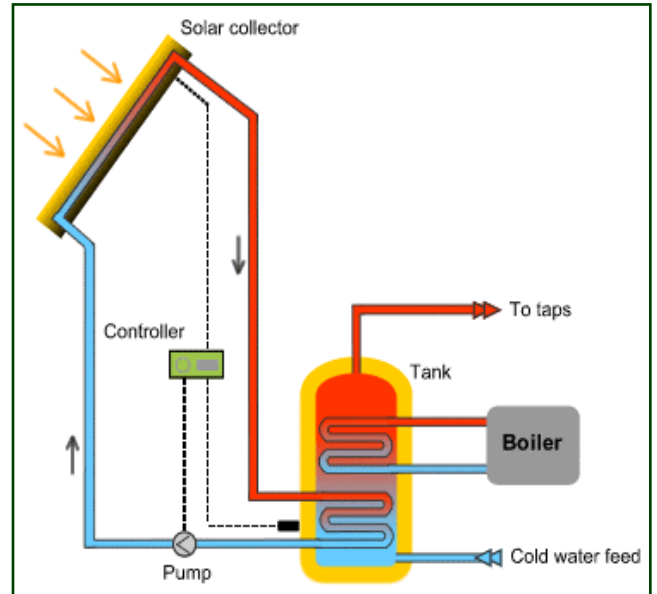

**Solar/Wind Shipping Container Units**

- Infrastructure development
- Natural disasters
- First Response remote power

**Solar-Driven Municipal Sewage & Fuel Pumps**

- Reduce and maintain functions during power outages

**Solar Water Heating**

- Immediately reduce water heating costs
- Ideal for buildings and public swimming pools

**Power Console**

- 1 KW of power generation at all times
- Easily transportable for military and disaster relief

**Mobile Remote Power**

- Ideal for events, agile communications, and security
